

Reverse Auction System Upgrade – Version 3

Structure | Current Features | Upcoming Financial Model | Roadmap

1. Reverse Auction Engine (Current System)

- Automatic auction start when a job is posted
- Default bidding duration – 24 hours
- Real-time vendor bid submission
- Admin dashboard monitoring
- Admin controlled final winner selection

The current system allows vendors to participate in live reverse auctions once a job is posted. The admin monitors the process and performs the final vendor selection.

2. Vendor Dashboard Functionality

- Vendor can view their submitted bid
- Current lowest bid visible anonymously
- Bid updates allowed before auction closes
- Real-time position tracking

3. Admin Control & Time Extension

- Auction auto-start system
- Default 24 hour bidding window
- Admin can extend auction time
- Final vendor selection controlled by admin

4. Vendor Registration & Deposit Model (Upcoming Feature)

- Vendors will be required to register before participating in bidding
- Platform Fee: 1% of job value
- EMD (Early Money Deposit): 2% of job value
- Total payment at registration: 3% of job value
- This feature is planned for the next development phase

5. Example – Rs 1,00,000 Job (Planned Model)

- Platform Fee (1%) = Rs 1,000

- EMD (2%) = Rs 2,000
- Total Registration Payment = Rs 3,000

6. Planned Refund Policy

- Non-selected vendors will receive EMD refund
- Platform Fee (1%) will remain non-refundable
- Refund expected within 4–5 working days
- Initial phase may include manual verification

7. Winner Selection Logic

- System highlights lowest bid automatically
- Admin reviews final vendor selection
- Vendor credibility and documentation considered
- Past performance may influence decision

8. Current System Status

- Auction engine operational
- Vendor bidding system functional
- Admin dashboard active
- System stable in testing environment

9. Development Roadmap

- Implementation of vendor registration system
- Payment gateway integration
- Automated invoice generation
- Refund workflow automation
- Security and performance optimization

10. Next Phase – Technical Improvements

- Fix technical bugs discovered during testing
- Improve vendor dashboard UI
- Improve auction performance under higher traffic
- Prepare system for production deployment

Closing: Live Competition | Transparent Pricing | Controlled Decisions
